WILKES SOLUTIONS INC.

WILKES SOLUTIONS:

Fuel services and products at work for you!

Whether it's
*gasoline or
diesel,*
**Wilkes
Solutions**
services and
products
ensure
quality
fuel—
**EVERY
TIME!**

The Fuel Contamination Issues of Today

Contaminated fuel can be very costly to your company. Standby power needs a clean supply of diesel to maintain proper engine function and more importantly, to perform for you and your customers when the power grid shuts down.

How can WSI Services and Products Help?

To ensure purity and quality of fuel, we use a system of:

- Fuel Polishing and Filtration
- Tank Cleaning
- Fuel Testing and Sampling

Fuel Quality Assurance Program (Polishing)

- Pull fuel samples
- Send samples to third party lab
- Review lab findings
- Develop procedure
- Chemical treatment plan
- Clean fuel tank
- Filter fuel (Remove solids and water out of suspension)
- Polish fuel
- Pull fuel sample for retesting
- Record and keep all data for future reference

Emergency Dispatch
for Fuel Polishing
and Water Removal

NOW AVAILABLE

Automated Filtration Systems for Storage Tanks up to **30,000 Gallons!**

NEVER FUEL POLISH AGAIN?

Wilkes Solutions Automated Filtering System is the perfect answer to your fuel storage contamination issues

Three Steps to Successfully Eliminating Water, Microbes and Poor Fuel Quality

1 Fuel Polish and Tank Cleaning

Wilkes will start the process by a complete polish and tank cleaning to achieve an excellent base point for future monitoring of fuel quality.

Unfortunately, the best way to remove large volumes of settled water is to drain the tank. Very straightforward, but not cheap or convenient. Ambient moisture and condensation can be prevented from entering the diesel through the use of good desiccant breathers in combination with a blanket of dry air (or nitrogen) fed into the tank's headspace and out through the breather.

2 Install AN-1

The installation of the properly sized automated fuel maintenance system for your tank(s) sizes. There are no holes to drill or concrete pads to pour. Wilkes will guarantee there will not be modifications performed on your tank or installation piping that may void or compromise warranties.

3 Continual Filtering & Nitrogen

Now let the Wilkes AN-1 do the work for you. The water and particulate filters are active multiple times per day to clean and purify your diesel fuel. In addition, there is fuel chemical additive injected to keep your diesel at optimal effectiveness when called upon.

THE INTRODUCTION of NITROGEN to displace the oxygen. This unique use of nitrogen means you can rest assured that water and microbes are nearly non-existent.

Includes remote monitoring for worry-free fuel storage.
